Framework agreement for the supply and delivery of polyethylene crash control barriers

Clarification No. 3

Clarification requests

Question 1: Most such barriers come in the range of 6-10kgs when empty.
You are confirming that you want these to be 26-31kgs when empty.

Can you please give an indication what is the estimated weight when full of water or sand?

Answer 1: **As per clause 2.3 of the technical specifications the weight of the crash barriers must be at least 26 kg and not more than 32 kg when not filled with either water or sand.**

There is no restriction on the weight of the crash barriers when filled with water or sand.

All other tender documents, conditions and requirements, which are not superseded by this Clarification, remain in place.
